
ASSIGNMENT

LEVEL 5

COMP50001 : Commercial Computing

SENG2461_CYS2461

Hand Out Date: July 2025

Abdul Rahman Ahamed Muradh-CB012978

Santhosh Kulendren-CB013364

Danidi Thenuja Wickramasuriya-CB011433

Conganige Nishen Akash Anthony-CB013264

INSTRUCTION TO CANDIDATES

- 1. Late submission will be awarded zero (0) unless extenuating circumstances (EC) are upheld.**

- 2. Cases of plagiarism will be penalized.**
- 3. The assignment should be submitted as softcopy via LMS**
- 4. All evidences related to the sprint implementation in group assignment must be show cased in the final documentation.**

1) Introduction and Domain Study

With the fast pace and competition of the modern era, right exposure and resource allocation are necessary for developing young talent. Since stadia represents centers of discipline, teamwork, and self-development, sports need systems which nurture players and eliminate impediments.

Rural sports talent gets unnoticed though it holds immense potential, primarily because of lack of access to appropriate facilities, professional coaching, and avenues for demonstrating their talents. The support structures appropriate for these athletes with dedication would help them develop and give them equal chances of succeeding. As the underlying mission of sports development is enabling the youth and opening up avenues for them to flourish, it becomes necessary to adopt a structured approach which eliminates the gap between potential and opportunity by bypassing inefficiencies and adopting a streamlined methodology.

Inclusive talent development programs may also provide a chance for the rural sportspeople. As the International Journal of Sports Science and Coaching opines, "Providing equal access to training, infrastructure, and competitions help bridge the rural-urban divide, prevents the loss of potential talent, and ensures fair representation in sports."

Through these policies, institutions and governing agencies can provide an enabling and effective context through which rural athletes perform well and thrive.

2) Problem Background and Statement

Problem Statement

Gifted sports people remain unnoticed because of limited exposure and few opportunities for event participation. Limited access to appropriate training or plans of actions to pursue which results in wasted potential. This on a national level reduces the chances of National level talents going unnoticed.

The survey found that the majority of respondents were young athletes, 70% within the age group of 14–21 years, which suggests that rural Sri Lanka is rich in sporting talent among young people. Most of these athletes are involved in schools and clubs, 50% playing for rural clubs, 31.8% for schools, and 18.2% for both. This confirms that schools and clubs together create an effective platform for developing athletes at the grassroots level.

Sport participation is diverse. Nearly half of the participants (47.7%) participated in team sports, 27.3% in athletics, and 25% in both, suggesting that rural-based athletes are committed to a wide range of sporting codes.

Talent identification is closely linked to performance. A whopping 68.2% of the players said they were selected based on their performance in competitions, while 29.5% were chosen through fitness testing. This shows that identification based on performance is a motivating factor in rural sport and makes athletes want to do their best in competitions.

For access to information, the majority of athletes rely on schools (36.4%) and clubs (31.8%), showing that institutions at the local level play a key role in making athletes informed and linked to opportunities. Meanwhile, 18.2% said they utilize social media and 11.4% official websites, proving that digital preparedness is already present and can be leveraged.

Support systems are also vital. Over a third of athletes (36.4%) are coached by club coaches and 25% by school coaches, with the remainder actively searching for online tutorials and resources. This shows that athletes are eager to get better and are continually seeking ways to learn and improve.

Notably, the survey revealed strong appetite for digital tools:

- 31.8% of athletes are eager to use them for event and tournament details.
- 20.5% would prefer monitoring performance and training online.
- 9.1% would prefer applying for scholarships online using systems.
- 6.8% were interested in using platforms to connect clubs and coaches.

Such overwhelming support is evidence of how open rural athletes are to adopting digital platforms that would enhance visibility, render communication effective, and provide new lines of development.

In general, the survey paints a highly positive image of Sri Lankan rural sports talent. The players are young, motivated, and engaged in team and individual sports, with solid institutional support from schools and clubs. They are also forward-looking, with an openness to embracing digital solutions that have the potential to enhance their sporting experience to the next level. This then makes the introduction of a centralized online scouting and management system a very timely step to further empower rural players and witness them receive the recognition and opportunities that they deserve.

Summary of the top challenges

For Athletes:

- **Lack of Exposure:** Rural athletes remain unnoticed due to limited scouting at school and provincial events.
- **Limited Record-Keeping:** No proper system to track or showcase their achievements, making recognition difficult.
- **Unequal Access to Facilities:** Most training grounds and advanced equipment are located in urban areas, leaving rural athletes underprepared.
- **Missed Opportunities:** Information about trials, tournaments, and scholarships rarely reaches athletes directly, causing many to miss out.
- **Lower Visibility in Selections:** Athletes are often judged on single-day performances without consideration for their backgrounds or limited preparation.

For Coaches and Federations:

- **Informal Scouting Methods:** Coaches rely on personal observation and word of mouth rather than systematic processes.
- **Weak Communication Channels:** Notices about events or training camps often arrive late and are shared only through schools.

- **Resource Constraints:** Rural coaches face shortages of equipment, facilities, and financial support, limiting training quality.
- **Limited Reach of Federations:** Talent identification is irregular, with federations rarely conducting structured visits in rural areas.
- **Dependence on Personal Networks:** Without a central system, coaches must use personal contacts to recommend athletes, leading to inconsistency and bias

Problem Background:

The issue of rural sporting talent in Sri Lanka not being discovered or given adequate resources is one that has long been an on-going matter to hinder the development of young sporting material. Rural provinces such as Uva, Northern, and Eastern continually produce highly potential material, but these athletes are not found during school and provincial selections. The problem emerges from poor scouting systems, absence of, or informal, record-keeping, and poor communication between federations, schools, and local clubs. As selections occur annually, the problem emerges annually, thus making rural athletes ineligible despite demonstrating talent.

Facilities and infrastructure for rural schools and communities are minimal, and there is poor access to professional coaching, formal training programs, and financing. Achievements go unrecorded seriously and do not attract credibility at higher levels, thus preventing the athletes from earning recognition. Some schools have sport competitions and a few organizations conduct training programs, but the coverage is thin and does not develop sustainable opportunities for developing long-term athletes.

There is a wide gap in the use of digital platforms for sporting development in Sri Lanka. The existing available platforms are out of date and focus on news broadcasts, with no provision for athletes to track their performance, maintain verifiable records, or communicate with selectors. This absence of a computerized system on a centralized basis directly contributes towards the invisibility of rural athletes and further widens the opportunity gap between the urban and rural youth. The outcome is identification of more talent slipping away, which otherwise could contribute to national sporting achievement as well as to social welfare on a community basis.

2.1. How it works at Present

- The Ministry of Sports is governed under 8 major organizations, with the Department of Sports governed by the Director General (DG).

- There are presently 74 federations that register clubs that organize events, tournaments, and training programs.
- Federated coaches have the role of sourcing and nominating talent, with the Ministry not being directly involved in the choice of athletes.
- Talent exposure is event-oriented: the majority of athletes, especially rural ones, are only uncovered under massive events such as the National Sports Festival.
- This process shows that there is no consistent, centralized, or ongoing forum to track athlete development, achievement, or access across the country.

- **Issues Faced**

- Event-Based Recognition: Rural players are only witnessed at important events, while domestic performances remain unrecorded and unseen on a continuous basis.
- No Central Database: Because records are kept by clubs and federations individually, there is no collective digital site to track players' profiles, stats, or history.
- Late Communication: Information about tournaments, scholarships, and trials reaches through schools or word of mouth and hence is late and unreliable.
- Unfair Exposure: Urban players have better facilities and more exposure, while rural players lack opportunities even when they are full of potential.
- Limited Access: With no internet site, coaches and players cannot gain access to information, share achievements, or connect with federations.
- Neglected Chances of Improvement: Training programs and scholarships exist, but the majority of the players are unaware of them or do not have the digital platforms to apply.

2.2. The need for Improvement

- Informal Talent Identification: Periodic talent identification occurs in village games primarily during school games or village games. There is no formal, systematic scouting program, and many players are overlooked
- Weak Information Networks: Trial, tournament, and training camp announcements arrive late and are announced through schools only. Opportunities never find many athletes in time
- Poor Record-Keeping: Rural athletes' performances often go unnoticed or are recorded in an informal manner, and it becomes difficult for selectors to fairly judge their performance

- **Unequal Access to Facilities:** State-of-the-art facilities are mostly located in urban regions, such as the sole two synthetic tracks available in the Western Province, limiting rural athletes from training competitively
- **Limited Opportunities for Scholarships and Progression:** Scholarships and higher prospects are mostly dependent on the coaches' personal network, leaving the majority of rural athletes behind due to the absence of an organized system
- **Underutilization of Digital Platforms:** No digital platform exists today to showcase the profiles of athletes, track progress, or connect rural talent with federations, leaving more than 75% of the athletes behind at the first phase

3) Requirements Gathering

Method Used:

- Surveys

Objectives:

- To find out the challenges faced by rural athletes specifically aiming to identify gaps in exposure, communication with federation and opportunities.
- To find out the features desired by the athletes and the preferred design

Findings:

- **Athlete age composition:** Most of the participants were under-aged players, 38.6% aged between 18 and 21 and 31.8% between 14 and 17, confirming rural players are most concentrated at the most crucial development stages.
- **Composition of players:** Rural clubs were accounted for by 50% of the players, schools for 31.8%, and by 18.2% played both. It means that schools and clubs are both essential settings developing rural sportsmen.
- **Sports distribution:** A near even 47.7% of the respondents engaged in team sports, 27.3% participated in athletics, and 25% were evenly distributed across the two. This is evidence of diversified participation across over one sporting domain.
- **Selection strength:** The widest (68.2%) choice was through excelling in events, which is a reflection of focus on the visibility of talent in competitions.
- **Access to information:** Over two-thirds of the athletes obtained opportunities through clubs (31.8%) and schools (36.4%), indicating that established sport networks at a community level are vital.
- **Nodes of access to scholarship:** While 27.3% accessed through clubs and 22.7% accessed through schools, there is clear evidence that institutions already play a role in bridging athletes with resources.

- Availability of mentorship: More than one-third (36.4%) of the athletes were guided by club coaches, 25% with school coaches, illustrating the considerable role of mentorship in rural sport.
- Need for digital tools:
 - 31.8% highlighted having access to tournament & event information as a tool requirement
 - 20.5% supported their use to track training & performance
 - 9.1% advocated for tools to use in scholarship applications
 - 6.8% wanted platforms to connect with coaches/clubs

This points to an evident intention to adopt digital platforms for sports development.
- In conclusion, the survey evidence strongly shows that rural athletes are highly committed, talent-oriented, and ready to adopt digital solutions that can enhance visibility, provide organized guidance, and enhance access to sporting opportunities.

Method Used:

- Interviews

Objectives:

- To acknowledge the challenges of coaches in rural areas to detect, cultivate, and bring up rural players, e.g., scouting efforts, and communication issues.
- To obtain opinions from the Sports Ministry regarding current policies, support systems, and possibilities for having a central mechanism to fight the rural–urban sporting imbalance.
- To obtain expert opinion on the feasibility, desired traits, and long-term sustainability of an online platform that would support rural players.
- So as to confirm survey findings by comparing the problems of athletes with opinions of top decision-makers and mentors within the sport network.

Findings:

- Coaches' perceptions
 - Coaches pointed out that talent identification in the rural areas is inconsistent as it is done on the basis of one-event performance without long-term follow-up.

- They pointed out the lack of properly organized training programs and facilities in the villages, which makes it hard for the athletes to train up to the level of the urban players.
 - News of tournaments or training camps mostly reaches them late through schools or personal contacts, minimizing the chances of their athletes.
 - Coaches were very interested in a centralized digital platform that could showcase athlete profiles, record performances, and track training progress.
- Sports Ministry Secretary's perspective
 - Confirmed that there is policy-level support, but the scope is hampered by the antiquated nature of communications and the lack of centralized data.
 - Confirmed that scholarships and schemes are not optimally utilized as athletes are unaware of them or do not receive timely information.
 - Emphasized the ministry's priority on technology-driven solutions for bridging the rural–urban gap, with particular interest in digital scouting and event management systems.
 - Fostered the idea that a web or mobile-based system would be capable of connecting federations, coaches, and athletes more efficiently.
 - In brief, the interviews confirm that policymakers (Sports Ministry) and practitioners (coaches) recognize the same gaps—lack of exposure, ineffective communication, and lack of centralized system—and both agree that digital tools could directly address these gaps.

4) Project Solution and Justification

a. Proposed Solution

- The proposed solution is a **centralized digital platform** that directly connects rural athletes, coaches, federations, and the Ministry of Sports. The system eliminates reliance on paper documentation and outdated websites by digitizing athlete data, competition registrations, scholarship information, and communication.

What does the solution do:

- **Athlete Profiles:** Athletes create verified accounts with personal details (name, age, district, sport), performance records (timings, distances, event results), and achievements, which can be updated continuously.
- **Performance Tracking:** Coaches log athletes' results after every competition or training session. The system generates charts and comparison reports to track improvement against benchmarks.
- **Competition Listings & Registration:** Federations and clubs post official tournament details (dates, venues, eligibility criteria). Athletes can register online instead of submitting physical forms. Confirmation receipts are stored in their profiles.
- **Results & Achievements Database:** After each competition, results are uploaded and automatically linked to the athlete's profile for verified record-keeping.
- **Scholarship Portal:** All available scholarships are listed in one place. Athletes can apply digitally, and coaches can submit recommendations directly through the system.
- **Notifications System:** Real-time updates are delivered via SMS for basic phone users and app notifications for smartphone users — covering competition deadlines, schedule changes, scholarship calls, and training camps.
- **Coach & Federation Communication:** Coaches and federation officers can share announcements, training updates, and notices through in-system forums and official messages.
- **Offline Access:** Training guides and forms can be downloaded for offline use in low-connectivity areas. Results recorded offline are synced once internet access is restored.
- **Multilingual Access:** Full support for Sinhala, Tamil, and English ensures inclusivity across the country.

- Dashboards for Federations & Ministry: Officials access centralized dashboards showing athlete distribution, performance trends, and participation statistics, enabling data-driven decisions about talent development.

b. Benefits

- Equal Opportunity: Equalizes opportunities by availing equal event experience, scholarship accessibility and availability of resources for training to both rural and urban athletes.
- Increased Visibility: Provides an online platform of athlete profiles, such that coaches, federations, and sponsors all have one place to search for new talent.
- Faster Communication: Replaces outmoded paper systems with real-time alerts to reduce time and ensure athletes never miss opportunities.
- Talent Development: Provides systematic tracking of progress through benchmark comparisons and performance metrics in aiding long-term athlete development.
- Policy Support: Gives the Ministry and federations integrated dashboards and reports to enable them make informed decisions so that resources are maximized and rural athletes are fairly represented.
- Accessibility: Owing to offline capability and support for multiple languages, it's become possible for all to utilize it irrespective of potential lack of Internet or IT experience.
- Scalability: The system is scalable to accommodate additional sport types and compatibility with future national sport databases and hence ensure sustainability.

5) Stakeholders of the System

a. Stakeholder Mapping

Stakeholder	Objective / What They Want
Athletes (Rural Players)	Equal exposure, access to tournaments, scholarship prospects, and recognition of their performance on a single platform.
Coaches (School & Club)	Useful means to follow up on progress of athletes, display talent profiles, and promote event and training communication.
Sports Federations	Simplified athlete database, easy handling of registrations, and maximized scouting efficiency.

Sports Ministry / DG	Consolidated data to monitor national talent development, equitable representation, and effective allocation of resources.
Clubs & Schools	Appreciation for developing talent, better federation relations, and effective promotion of their own athletes.
Parents & Communities	Assurance that youth talent is being developed, noticed, and is able to develop as national-level athletes.
Sponsors & Partners	Sustained reliable data and visibility into rural talent for potential sponsorships and partnerships.

b. User Personas and Solution Mapping

Persona	Goals	Pain-points	Expectations	Key User Stories	Solution Mapping
Ravi – Rural Athlete Age: 15–20, school-level, limited exposure	- Gain recognition for sports talent. – Find tournaments & scholarships. – Track progress digitally.	- Lack of visibility beyond local events. – No structured platform to showcase achievements.	- Digital profile for stats & achievements. – Alerts about upcoming events & scholarships.	<i>As an athlete, I want to create a profile and get notified about events so I can showcase my talent.</i>	Athlete Dashboard Notifications Scholarship Access

Coach Nimal – Rural Coach Age: 30–45, manages village athletes	- Support athletes with exposure. – Track their performance over time. – Connect with federations.	- Relies on manual scouting. – No platform to manage athlete data.	- Centralized database to update athlete progress. – Easier communication with federations.	<i>As a coach, I want to upload my athletes' achievements so federations can recognize them.</i>	Coach Portal Athlete Management Tools Federation Link
Ms. Perera – Federation Officer Age: 35–50, mid-level administrator	- Identify and recruit talent. – Manage event registrations. – Access verified athlete info.	- Decentralized and inconsistent athlete data.	- Access to a centralized, verified database. – Automated event registration.	<i>As a federation officer, I want to view athlete profiles and generate reports so I can select talent efficiently.</i>	Federation Dashboard Event Registration Reports
Mr. Silva – Ministry Representative Age: 40–55, policy-level decision maker	- Oversee rural athlete development. – Track federations' performance. – Ensure fair representation.	- Limited access to structured reports.	- Analytics dashboards with athlete trends. – Data-driven decision-making.	<i>As a ministry official, I want to see athlete development reports so I can make policy decisions.</i>	Admin Dashboard Analytics Reports Policy Insights

6) Revenue Model

a. Who pays, why, and how

Stakeholder	Value they get	Monetization method	Suggested price
Athletes (Rural)	Free access, profiles, event notices, scholarships, offline features	Free (keeps it inclusive; drives adoption)	LKR 0
Coaches	Athlete tracking, progress reports, event tools, recommendations	Coach Pro subscription	LKR 500 / month
Schools	Manage school teams, event registrations, notices	School plan	LKR 750 / month
Clubs/Academies	Squad management, showcase athletes, event ops	Club plan	LKR 1,250 / month
Federations (National & Provincial)	Admin dashboards, reports, integration, white-label listings	Federation license	LKR 20,000 / year
Ministry / DG Office	Central analytics, policy dashboards, national oversight	Annual support grant / SLA	LKR 1,000,000 / year (baseline)
Event Organizers (schools, clubs, federations)	Online registration, payments, start lists, results	Per-registration platform fee	LKR 100 / registration
Sponsors/Brands	Brand placement, featured athletes, event co-branding	Sponsorship packages	LKR 500,000 / sponsor / year

Parents/Community	Support specific athletes	Crowdfunding fee	5% service fee on funds raised
Training Providers/Coaches	Sell drills, plans, courses	Marketplace commission	30% per sale
Vendors (equipment/nutrition)	Reach targeted audience	Lead-gen/affiliate	% commission or fixed fee

b. Year-1 Base Case

Adoption assumptions (conservative but realistic):

- Coaches: 250 on paid plan
- Schools: 120 paid
- Clubs/Academies: 80 paid
- Federations: 1 national + 9 provincial = 10 licenses
- Sponsors: 3 sponsors
- Ministry grant: 1 contract
- Events processed: 40 events $\times$ 120 registrations avg
- Crowdfunding through platform: LKR 2,000,000 total raised
- Training marketplace: 500 paid downloads @ LKR 500, 30% commission
- Coach verification (one-time): 150 coaches @ LKR 1,000 (KYC/cred check)

Calculations

1) Subscriptions

- Coaches: $250 \times \text{LKR } 500 \times 12 = \text{LKR } 1,500,000$
 - Schools: $120 \times \text{LKR } 750 \times 12 = \text{LKR } 1,080,000$
 - Clubs: $80 \times \text{LKR } 1,250 \times 12 = \text{LKR } 1,200,000$
 - Federations: $10 \times \text{LKR } 20,000 = \text{LKR } 200,000$
- Subtotal (Subs) = LKR 3,980,000

2) Sponsorships

- $3 \times \text{LKR } 500,000 = \text{LKR } 1,500,000$

3) Government/Institutional

- Ministry support = LKR 1,000,000

4) Transactional & Marketplace

- Event platform fee: $40 \times 120 \times \text{LKR } 100 = \text{LKR } 480,000$
 - Crowdfunding fee: $\text{LKR } 2,000,000 \times 5\% = \text{LKR } 100,000$
 - Training marketplace: $500 \times \text{LKR } 500 \times 30\% = \text{LKR } 75,000$
 - Coach verification: $150 \times \text{LKR } 1,000 = \text{LKR } 150,000$
- Subtotal (Tx & Mkpl) = LKR 805,000

Year-1 Total Revenue

LKR 3,980,000 + 1,500,000 + 1,000,000 + 805,000 = 7,285,000 LKR

c. Year-3 Scale Case

Scale assumptions:

- Coaches 500; Schools 240; Clubs 160; Federations 20
- Sponsors 5; Ministry grant steady
- Events: 80 events × 150 registrations
- Crowdfunding: LKR 5,000,000; Training marketplace: 1,500 downloads

Calculations

1) Subs:

- Coaches: $500 \times 500 \times 12 = 3,000,000$
- Schools: $240 \times 750 \times 12 = 2,160,000$
- Clubs: $160 \times 1,250 \times 12 = 2,400,000$
- Federations: $20 \times 20,000 = 400,000$

Subs subtotal = 7,960,000

2) Sponsorships: $5 \times 500,000 = 2,500,000$

3) Ministry: 1,000,000

4) Transactions/Marketplace:

- Events: $80 \times 150 \times 100 = 1,200,000$
- Crowdfunding fee: $5,000,000 \times 5\% = 250,000$
- Training marketplace: $1,500 \times 500 \times 30\% = 225,000$
- Coach verification (top-ups/new): 100,000

Tx & Mkpl subtotal = 1,775,000

Year-3 Total Revenue

7,960,000 + 2,500,000 + 1,000,000 + 1,775,000 = 13,235,000 LKR

d. Why this aligns with every stakeholder

- Athletes: free access generates network effect and content → everyone else pays to serve/ reach them.
- Coaches/Schools/Clubs: low-cost tools that address admin pain → subscription base that recurs.
- Federations/Ministry: governance, dashboards, compliance → licenses + agreement for support.
- Event Organizers: per-registration fee that scales with use (no upfront friction).

- Sponsors/Brands: targeted reach to actual participants → sponsorship that repeats.
- Parents/Community: optional support path → small but meaningful fee stream.
- Trainers/Vendors: marketplace + lead-gen models aligns revenue with value delivered.

e. Sensitivity Analysis

Its revenue streams are most sensitive to three variables: subscription payments, quantity of event registrations processed, and quantity of sponsorships acquired. For example, with each additional sponsor comes LKR 500,000 annually, and with each additional 10 events with average registration comes around LKR 120,000 in platform fees. Likewise, 20% fluctuation in the schools and clubs subscribed may change revenues by nearly LKR 1 million annually. These levers also show that the model is scalable, and revenues growth is directly associated with adoption and utilization across the stakeholders.

National Championships	3 Gold Medals	2023-08-30
South Asian Games	1 Silver Medal	2023-05-18
Asian Games Qualifiers	1 Athlete Qualified	2023-10-15

Additional Information

Training Philosophy
Focuses on holistic development, combining physical training with mental conditioning.
Aim: to develop athletes for international competitions, including the Olympics.

Notable Athletes
Former athletes include: Karindu Perera (National Champion), Anjali Fernando (South Asian Games Medalist).

Question 12

b. Interview Transcripts

Transcript 1: Athletic Coach Interview 1

Q1. What is your talent identification process? How do you select members for your team?

We mainly look for physical features such as height, hip and ankle size, and running style. However, natural features aren't enough, so we run coaching camps in rural areas to test and train children to see if they can be developed further.

Q2. Can rural players participate in tournaments as clubs? Who handles this process?

Yes, they can. Sri Lanka has many clubs such as Sri Lanka Athletic Club, Lanka Lions, and Track Masters. Players can participate through these clubs by paying registration fees.

Q3. How does rural talent compare to urban talent? What are your insights?

Rural athletes often have greater natural strength due to lifestyle and nutrition. They consume more natural foods compared to urban athletes, making them more resilient and hardworking in training.

Q4. How do you know about school events or tournaments?

Mostly through letters sent to schools and via WhatsApp groups managed by health and physical education staff.

Q5. What events do players participate in?

Players participate in Junior Tabet, Senior Tabet, Zonal, District, Provincial, All-Island, and National-level tournaments.

Q6. How do players register for these events?

Registration happens through schools, coaches, or MICs. Without them, players cannot access the information or register.

Q7. How do you inform players about these events or tournaments?

Usually, coaches and school officials receive the notifications via letters, not the athletes directly.

Q8. Are there any training camps?

Yes, but they happen rarely (around once in 5 years). Notices come via physical letters.

Q9. Are there scholarships for players?

Yes, some scholarships exist through international schools. Coaches usually facilitate these if they notice talent, but there is no formal system.

Q10. Are there communication gaps between rural coaches and associations?

Yes, communication is weak. There isn't a structured system to share schedules or drills.

Q11. What challenges do you face in accessing equipment?

Equipment is scarce in rural areas. There are only two synthetic tracks in Sri Lanka, both in the Western Province, so athletes must travel far for training.

Q12. How do players go to the national level?

By progressing from Zonal → District → Provincial → Nationals, and then depending on performance, they may be selected to the National Pool.

Q13. How do you prepare rural talents for national-level competitions?

It takes 5+ years of training to build them up, including proper nutrition, drills, and injury management.

Q14. What challenges do you face in promoting rural talent?

The biggest challenge is identifying them early enough. Many go unnoticed.

Q15. What would be a better way to link people and systems for scouting?

A centralized **digital platform or app** would be ideal to showcase athletes and connect them with coaches and federations

Transcript 2: Athletics Coach 2

Q1. What is your talent identification process? How do you select members for your team?

At school level, we look at height, fitness, and running ability. We select the most promising athletes and train them further, picking the best for competitions.

Q2. Can rural players participate in tournaments as clubs? Who handles this process?

Yes, rural athletes can participate through clubs. The Sports Officer in the Secretariat Division manages this process and also provides equipment.

Q3. How does rural talent compare to urban talent?

Rural athletes often have better natural fitness due to farming lifestyles and healthier food habits, making them easier to train.

Q4. How do you know about school events or tournaments?

Through letters sent to schools and WhatsApp groups managed by physical education staff.

Q5. What events do players participate in?

Athletes compete in events from Divisional → District → Provincial → All-Island levels, including the National Youth Festival and National Sports Festival.

Q6. How do players register for these events?

Through manual document processes managed by schools or associations.

Q7. How do you inform players about these events?

Usually via WhatsApp groups and sometimes letters.

Q8. Are there training camps?

Not regularly. Occasionally, the Sports Ministry arranges camps and notifications go through WhatsApp.

Q9. Are there scholarships?

There's no formal scholarship system. If opportunities exist, they are handled manually through documents or coaches' recommendations.

Q10. Are there communication gaps?

Yes, sometimes information doesn't reach rural coaches on time. Most communication depends on WhatsApp groups.

Q11. What challenges do you face in accessing equipment?

Lack of donors and limited access to affordable equipment. Coaches also struggle to find places to rent proper gear.

Q12. How do players reach the national level?

Athletes progress step by step: Divisional → District → Provincial → All-Island → National Pool.

Q13. How do you prepare rural talents for national-level programs?

By supporting them to progress through each stage of competition, with focused training.

Q14. What challenges exist in promoting rural talent nationally?

Mainly limited equipment, nutrition affordability, and lack of proper training grounds.

Q15. What would be a better way to scout talents?

Using **digital systems for talent tracking and communication** between rural coaches and associations

Transcript 3: Secretary of Sports Ministry (Expanded)

Q1. How is the Ministry of Sports structured?

The Ministry has **8 main bodies**, and the Department of Sports is overseen by the **Director General (DG)**.

Q2. How many federations are there?

Currently, there are **74 registered sports federations** in the country.

Q3. What role do federations and clubs play?

Each federation registers clubs, and the clubs are responsible for **organizing events, tournaments, and training programs**.

Q4. Does the Ministry directly pick athletes?

No. Talent is spotted by coaches under federations. If the Ministry needs athletes, the request goes through the DG, who coordinates with the federations.

Q5. Where is rural talent usually noticed?

Mostly at large-scale events such as the **National Sports Festival**. Continuous scouting in rural areas is still limited.

Q6. How is information about events, tournaments, or scholarships currently managed?

At present, it is done mainly through **physical documentation and manual processes**. Schools or clubs receive letters, and athletes are informed through their coaches. There is no fully digital system.

Q7. Are there digital platforms or websites currently used by federations?

Some federations have **websites**, but most are **outdated and rarely updated with event details or athlete databases**. As a result, information doesn't always reach rural areas effectively.

Q8. What challenges arise from depending on manual documentation?

It causes **delays, loss of data, and lack of transparency**. Many athletes miss opportunities simply because they are not informed in time, and there's no single place to track all updates.

Q9. Do you see the value in introducing a centralized digital system?

Yes, absolutely. A **centralized online platform** could provide real-time updates on events, scholarships, and athlete progress, ensuring fairness and equal opportunities across rural and urban areas.
